

Compaction Catch Up

June 2023

Welcome to the June 2023 edition of Compaction Catch Up, our new monthly update on how the business is doing. We aim to show off our production capabilities as well as our superb team.

Some of you may have already noticed we have a new website. Our previous one was overdue for an update.

We will be using the new website to keep all our clients both, future and current, up to date with important developments within the business as well as within the wider industry of recycling and waste management.

We featured in Manufacturing and Engineering Magazines latest issue (see the full article HERE). The article delves into the mind of our director Steve Mason and his vision of how manufacturing should be done We weren't quite cover model ready but we did get mentioned on the front cover!

May was a quiet month across the industry with all the bank holidays giving people plenty of time off and many taking the opportunity for holidays but things have sped up again in June.

- We have kept our engineers busy with 18 balers and compactors being installed this month.
- We had a malfunction with our some of our programes that affected the Operations and Sales Team with us being unable to access most of our programs for daily work. This was quickly resolved by our IT department and by the following day we were all back on track
- Our solar panels at our Verwood workshop produced 10.15MWh this month bringing our total production this year to 35.47MWh

- The Operations Team have continued their slow march towards a completely paperless office with turning our paperbased filing system into a digital filing system. It's going to be a long process to go through all our customers files, with an estimated completion date mid-2024
- The workshop in Verwood received 4 groups of visitors this month to meet the team and check out our production line.
