

# Compaction Catch Up

## July 2023

Welcome to the July 2023 edition of Compaction Catch Up, our monthly update on how the business is doing. We aim to show off our production capabilities as well as our superb team.

The marketing team is working on updating the spec sheets so they contain the latest information, as we continually improve all our balers and compactors.

We are sure they will become an invaluable and informative touchpoint for prospective partners.

Our Marketing Assistant Kevin and his fiancée Roberta completed the Pretty Muddy Race for Life in Southampton, raising £70 for Cancer Research. Unfortunately, a disease both are familiar with.

Our 3D Artist has upgraded his computer to handle the latest version of Solidworks and between him and Steve they are updating many of the baler and compactor designs as well as working on the bespoke systems that have been requested recently, including a special bin lift for a unique style of bin.

# Compaction Catch Up

## July 2023

July saw the hottest day on record for the planet with an average world-wide temperature of 17.01 Celcius, beating the previous record of 16.92 in 2016.

Extreme heatwaves have been felt across many countries causing many deaths and fires. We are glad we are doing our part to reduce our and our partners' impact on the environment.

- this month has been very busy for our engineers with over 98 machines serviced and 2 LOLERs completed.
- Our solar panels at our Verwood workshop produced 7.63MWh this month bringing our total production this year to 42.31MWh
- Whilst we are talking solar, the new solar-powered static compactor we installed last month we have been told is working flawlessly.
- The Ops team have completed the digitising of customers' files up to the letter E now.
- DEFRA and the Environmental Agency have unveiled the removal of the cap for fines for polluters. A move that we support.

- One of the vans is becoming too unreliable after 200,000 miles on it. So we bought a new long-wheelbase Ford Transit Custom. Our engineer Ashley will be getting this new van once all our branding is covering it.
- As we mentioned last month we had some system malfunctions that affected our ability to work. We have decided to upgrade several systems including our phones and internet to improve our resilience and reliability. If we experience any interruptions we will let everyone know through our social media.
