

Compaction Catch Up December 2023

Welcome to the December 2023 edition of Compaction Catch Up, our monthly update on how the business is doing. We aim to show off our production capabilities as well as our superb team.

We broke our metal cutting guillotine so we replaced it with a new-to-us Morgan Rushworth Model HGL 3100/8 with a 3m cutting width. This new guillotine has a 50cm larger cutting capability which is a massive boost to our manufacturing process, especially for the larger bespoke projects we regularly get.

If you remember the bright red SC3000 Static Compactor we built in September last year the same company requested another interesting colour for their new HB550 Mill Size Baler RAL 4003 Heather Violet. But we do prefer their name for the colour 'Snow Fairy Pink'

As you may have seen on our socials Steve visited A1 Bacon to get the measurements for a bespoke mobile compactor we will be building for them. Whilst he was there he was given a couple of packs of their delicious bacon. The only thing to do with that much bacon was to make the team back at the workshop a couple of bacon sandwiches each.

Steve and Michael in their best model pose.

Our mountain of fresh cooked delicious bacon.

Compaction Catch Up December 2023

With the Christmas closure, we made a push for getting as many balers and compactors out of the workshop and installed in December as we could, we managed to get 15 compactors and balers installed.

- Our engineers have serviced 56 balers and compactors this month.
- We completed 15 installs this month, with 5 balers, and 10 compactors, including a nice dark blue MC32 and a bright red refurbished 14yd Mobile Compactor.
- Jordan Bishop, the boxer we sponsored had a difficult fight but came out as the winner, defending his title.
- We have yet to complete the new 3D design room as we are waiting for some of the furniture to arrive.
- Whilst we had a handyman on site for the design room we did ask if he could do some extra and got the outside of the mezzanine painted finally, it is no longer the unfinished OSB and is now white to match the rest of the building.

The mezzanine before

And after
